

Fact Sheet

C2N Portable Backup Drives

Backup all of the computers on your network automatically.

Announcement Date (embargo to): Jan 6, 2010 **Shipping:** March, 2010

Price: \$TBD

Available at: www.clickfree.com

Product Description

The Clickfree C2N is a complete multi-computer automatic backup solution that works over your existing computer network. C2N has all of the functionality of the category-leading Clickfree C2 backup drive, including the integrated USB cable, photo sharing, import from iPod, CD/DVD burning, and hardware-encryption features.

The C2N is the first product to be launched with Clickfree's new BackupLink™ technology, which helps people to backup all of the computers on their network automatically, whether they are Macs or PCs or a mixture of both, and with a setup so easy that no network expertise is required at all! The C2N comes in high gloss black, and in storage capacities of 250GB to 640GB, with larger capacities to be announced later in the year.

With Clickfree BackupLink™, just plug in C2N once to each computer on your network that you want to back up, then leave it connected to any computer on the network, and backup will happen automatically for all of your computers. Clickfree's smart backup will automatically find, organize, and store hundreds of file types, and continue to backup what has changed, organized by each computer – it's completely automatic.

Key Features

- **Clickfree Award-Winning Smart Backup Technology** automatically backs up and organizes hundreds of file types, and makes it easy to restore or transfer files to new computers, even when upgrading Windows operating systems.
- **Clickfree BackupLink™** Technology – backs up computers on your network automatically, and is setup easily by just plugging in once to each computer using the built-in USB cable.
- **Complete Suite of Clickfree Backup Features:**
 - **Easily Share Photos and Files** – including upload to Facebook, Myspace, and Flickr
 - **Import from iPod:** Import music from your iPod/iPhone to any computer. Just connect the iPod or iPhone with C2N connected to your computer.
 - **256-bit Hardware-Accelerated Encryption** – secure your files with encryption that won't slow down your computer
 - **Make extra CD or DVD backups** (requires CD or DVD burner)
 - **Extracts and organizes email attachments** from Microsoft® Outlook and Outlook express
- **Optional Dock** (sold separately): Quick and tidy cabled connection to your computer
